

DATA XSTREAM

Systems Integration & Architecture

Applied Materials Success Story

Applied Materials needed to connect various systems to SAP MDM using SAP PI 7.0. These interfaces were mission critical, and needed special consideration in design and implementation. Another team had already begun work but had run into problems with interfacing to custom applications communicating with MDM.

DataXstream Responds

In partnership with SAP, DataXstream had already developed several integration solutions to rapidly connect the SAP ECC and SAP MDM platforms. Custom integration scenarios leveraging change pointers and standard ALE technologies were used in combination with SAP XI to create a two-way communication system with R/3 and ECC identifying whether materials, customers, or vendors successfully posted into MDM.

Applied Materials Results

Applied Materials was able to implement the interfaces in time for integration testing phases, and was able to go live as planned. The interfaces continue to be exceptionally stable and highly reliable.

“DataXstream brought uncompromising talent and ability to our team at a time when it looked like we weren’t going to be ready.

It has been a very pleasant experience working with them and I look forward to working with them on future projects.”

Harrison Holland
MDM Team Lead
Applied Materials-SAP
