

DATA XSTREAM

Systems Integration & Architecture

Church & Dwight Success Story

Church & Dwight needed to update their documentation standards, their ABAP programming standards and their SAP monitoring procedures.

In preparation for an upgrade from 4.7 to ECC 6.0, Church & Dwight needed to identify the extent of and need for their customizations. Eliminating unneeded customizations would reduce the effort, cost and complexity of the upgrade project.

DataXstream Responds

After determining the business and regulatory requirements for Church & Dwight Information Technology standards, DataXstream provided ABAP programming standards, and technical specification documentation. Additionally, DataXstream ensured that the newly established best practices were adhered to by providing ongoing monitoring procedures.

To address Church & Dwight's need for customization object discovery, DataXstream built automated customization mining and assessment tools.

Church & Dwight Results

Church & Dwight now has standards and monitoring procedures which meet their technical, business, and regulatory needs, and which also encompass the values of industry best practices.

Analysis of the information provided by the automated discovery tools, along with a combination of where-used and usage statistics identified a significant number of customized ABAP objects which could be left behind in the upgrade.

"Mike (DataXstream) handled himself in a true professional manner and was completely self-directed. Mike lead employees and other consultants alike through sessions designed to standardize our ABAP environment, with little to no support from me.

Mike's engagement here at Church & Dwight was high quality, and I would be pleased to do business with Mike and DataXstream in the future."
